WEEKLY RESEARCH FORUM

OCT. 15

4:00 PM

Dennis L. Shung M.D., Ph.D.
Associate Professor of Medicine
Senior Associate Consultant, Division of Gastroenterology and Hepatology
Director of Clinical Generative Artificial Intelligence and Informatics
Mayo Clinic

“A Golden Hammer: Advancing Gastrointestinal Research with Artificial Intelligence”

Generative AI systems, particularly coding agent harnesses, have decreased the barriers to accessing data, building models, and reimagining bioinformatics research workflows. Open and closed source large multimodal models have the potential to identify cohorts, extract relevant clinical concepts, and reshape information workflows.
