Combination Strategies to Improve Therapeutic Outcomes in Colorectal Cancer

Rajat Bhattacharya, Ph.D.
Faculty, Michael E DeBakey Department of Surgery, Division of Surgical Oncology
Baylor College of Medicine

There are few effective therapies for patients with metastatic colorectal cancer (CRC). Our translational studies focus on improving outcomes in patients with RAS/RAF mutated CRC. I will present findings from targeting MEK in RAS/RAF mutated CRC and other novel drug combinations identified from unbiased high throughput screening studies.
