Cognition in Parkinson's Disease: can neuroimaging enlighten us?

**Michele York, PhD
Assistant Professor of Neurology
Baylor College of Medicine**

Objectives:

At the end of this presentation, participants should be able to:

- identify the cognitive profiles in Parkinson's disease and Parkinson's disease dementia.
- discuss the relationship between volumetric changes on MRI and cognition in Parkinson's disease.
- identify the relationship between diffusion tensor imaging changes and cognition in Parkinson's disease.

Target Audience, Needs, Educational Methods, Activity Evaluation:

Physicians, residents, fellows, and other healthcare professionals need to be updated about new advances in the clinical and research areas for the diagnosis, treatment, and management of patients with neurological disorders. Educational methods will include lectures, case presentations, audio/video presentations, and questions & answer sessions. Participants will be asked to complete an activity evaluation.

Accreditation/Credit Designation

Baylor College of Medicine is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Physicians should only claim credit commensurate with the extent of their participation in the activity.
