

February 2010

Vol. 15 No. 2

The most common virus remains RSV, with small numbers of adenovirus, influenza A and para influenza viruses, rhinovirus, and human metapneumovirus detected either by culture or molecular testing. Stay tuned for "What's Going Round NOW!" for weekly updates.

Molecular Testing for Seasonal Respiratory Viruses January 2010

	# Tested	# Positive (%)
Influenza A	986	11 (1.12%)
H1 2009 swine		10 (<1.2%)
H1 seasonal		0 (0%)
H3 seasonal		0 (0%)
Non-typable		1 (<1%)
Influenza B	985	0 (0%)
Respiratory Syncytial Virus	985	324 (32.89%)
Parainfluenza type 1	650	13 (2.0%)
Parainfluenza type 2	650	1 (0.15%)
Parainfluenza type 3	650	10 (1.54%)
Human metapneumovirus	652	45 (6.9%)

EIA Rapid Test Results – January - 2010

	RSV	FLU A	FLU B	ADENO
Tested	877	903	903	340
Positive	148	16	0	7
% Positive	17	2	0	2

Viral Cultures –January - 2010

Total all	1157	Total Resp.	1011
Positive	256	Positive	246
% Positive	22	% Positive	24
