Monoclonal antibody therapies and neurologic disorders

George Hutton, M.D.
Assistant Professor of Neurology
Baylor College of Medicine

Objectives:
At the end of this presentation, participants should be able to:
• Describe the production of therapeutic monoclonal antibodies.
• Discuss neurologic diseases for which monoclonal antibodies have a current or a potential future indication.
• Understand neurologic adverse effects of monoclonal antibody use.

Target Audience, Needs, Educational Methods, Activity Evaluation:
Physicians, residents, fellows, and other healthcare professionals need to be updated about new advances in the clinical and research areas for the diagnosis, treatment, and management of patients with neurological disorders. Educational methods will include lectures, case presentations, audio/video presentations, and questions & answer sessions. Participants will be asked to complete an activity evaluation.

Accreditation/Credit Designation
Baylor College of Medicine is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Physicians should only claim credit commensurate with the extent of their participation in the activity.
