Systems-level neural repair:
the case of vision

Stelios Manolis Smirnakis MD PhD
Assistant Professor of Neuroscience and Neurology
Baylor College of Medicine

Objectives:
At the end of this presentation, participants should be able to:
• Explain in broad terms what we need to understand and control in order to be able to achieve neuronal circuit repair.
• Describe in broad terms what perceptual deficits are induced by permanent lesions to different parts of the adult visual system.
• Describe up-to-date evidence for the effects of visual perceptual retraining following visual cortical injury.

Target Audience, Needs, Educational Methods, Activity Evaluation:
Physicians, residents, fellows, and other healthcare professionals need to be updated about new advances in the clinical and research areas for the diagnosis, treatment, and management of patients with neurological disorders. Educational methods will include lectures, case presentations, audio/video presentations, and questions & answer sessions. Participants will be asked to complete an activity evaluation.

Accreditation/Credit Designation
Baylor College of Medicine is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Physicians should only claim credit commensurate with the extent of their participation in the activity.
