Tackling the Diagnostic Barriers of Psychogenic Non-Epileptic Seizures

David K. Chen, MD
Assistant Professor of Neurology
Baylor College of Medicine

Objectives:
At the end of this presentation, participants should:
• Be aware that nonconventional diagnostic tools such as home-video recordings and serum prolactin assays may provide helpful supplementary information toward the diagnosis of seizure-like events.
• Understand that clinical distinction of epileptic seizure and psychogenic non-epileptic seizures is possible and is critical toward proper clinical management.
• Recognize known discrepancies between neurologists and non-neurologists regarding the diagnostic accuracy of video-EEG.

Target Audience, Needs, Educational Methods, Activity Evaluation:
Physicians, residents, fellows, and other healthcare professionals need to be updated about new advances in the clinical and research areas for the diagnosis, treatment, and management of patients with neurological disorders. Educational methods will include lectures, case presentations, audio/video presentations, and questions & answer sessions. Participants will be asked to complete an activity evaluation.

Accreditation/Credit Designation
Baylor College of Medicine is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Physicians should only claim credit commensurate with the extent of their participation in the activity.
