Objectives – At the end of this lecture, participants should be able to:

• appreciate how transgenic mouse models for Alzheimer’s disease can be used to make predictions about therapeutic efficacy of anti-amyloid approaches for treating Alzheimer’s disease.
• recognize the limitations of transgenic mice for modeling human neurodegenerative disease
• consider the possibility that a combination of treatments with different therapeutic targets may offer greater benefit than monotherapies for Alzheimer’s disease

Target Audience, Needs, Educational Methods, Activity Evaluation:

Physicians, residents, fellows, and other healthcare professionals need to be updated about new advances in the clinical and research areas for the diagnosis, treatment, and management of patients with neurological disorders. Educational methods will include lectures, case presentations, audio/video presentations, and questions & answer sessions. Participants will be asked to complete an activity evaluation.

Accreditation/Credit Designation

Baylor College of Medicine is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Physicians should only claim credit commensurate with the extent of their participation in the activity.
