Get your influenza vaccine

If you are unvaccinated against COVID-19, get a complete vaccination series, along with a booster dose if eligible, as soon as possible.

Note: There are very few people who should not receive a COVID-19 vaccine for medical reasons. You should not receive it if you had a severe allergic reaction (e.g., anaphylaxis) after a previous dose of the COVID-19 vaccine or to a component of the COVID-19 vaccine.

Some people incorrectly believe that they should not get the vaccine if they have a serious chronic medical condition. The opposite is actually true. It is even more important that those with medical conditions become immunized. If you feel you should not receive the vaccine, please discuss with your personal physician.

If you previously had a documented case of COVID-19, the best available evidence at this time is you will still benefit from vaccination.

Receiving a COVID-19 vaccination series is the most important action you can take to protect yourself, and those around you.

Who will participate in your holiday bubble? Share this document and use it to guide a conversation with friends and family as you make your holiday plans.
Please score the following steps:

**Step 1: Assess the risk of those who plan to gather in your holiday bubble**

- Visit the CDC site: *People with Certain Medical Conditions* [https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html](https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html) and review the conditions that may put you or others at risk of a bad outcome from COVID-19.

Note if anyone participating in your holiday gathering is in a high-risk group.

- Score the risk of your bubble participants (select the highest score applicable):
  - One or more bubble participants are in a high-risk group: **5 Points**
  - No one is high-risk, but at least one bubble participant is unvaccinated (including children): **3 Points**
  - No one is high-risk, and all are vaccinated: **1 Point**

  Record your point value (1, 3 or 5)

**Step 2: Assess the COVID-19 disease burden in at least two communities: The community where you will gather to celebrate, and the community (or communities) from where you and your guest(s) will be traveling.**

- A US map will come up. Click on the county where you will be gathering for the holidays (you may need to zoom in on your state), and the counties from where you and your guests are traveling.

- When you click on these counties, the site will take you to a “Community Transmission” chart. Make sure “7-day Metrics” is selected. Look at the number listed for “Case Rate per 100k.” For all the counties you review, write down this number. Give yourself a score based on the case rate, using the highest county rate you identified:
  - 100 or above: **Score 3 points**
  - 50 or above, but less than 100: **Score 2 points**
  - Less than 50: **Score 1 point**

  Record your point value (1, 2, or 3)

**Step 3: Assess your personal risk tolerance.**

Select one of the following statements which most closely reflects your current degree of concern regarding COVID-19:

- I, or others in my holiday bubble, continue to have a significant degree of concern that we may contract COVID-19, or spread it to others. **Score 2 points.**

- Although I recognize COVID-19 remains a significant threat to public health, I am not overly concerned about personally contracting the disease or spreading it to my friends and family. My friends and family all have a similar low degree of concern. **Score 1 point.**

  Record your point value (1 or 2)

**Step 4: Add the results from Box A + B + C above. You should have a score that falls between “3” and “10,” inclusive. Record that number below:**

**My COVID-19 Holiday Bubble Risk Score (from 3-10):**

**Step 5: Refer to Managing Your Holiday Bubble in Lower and Higher Risk Environments (on the next page).**
Assessing your Score

Managing Your Holiday Bubble in Lower and Higher Risk Environments

If your Holiday Bubble Risk Score is less than or equal to “5” your planned holiday gathering has a relatively lower risk. In planning a safe holiday gathering, follow the recommendations in the Lower Risk Environment column.

If your Holiday Bubble Risk Score is from “6-10” your planned holiday gathering has a relatively higher risk. In planning a safe holiday gathering, follow the recommendations in the Higher Risk Environment column.

1 The behavior of the SARS-CoV-2 virus and spread of COVID-19 has proven difficult to predict with certainty. These guidelines should keep you, your friends and family relatively safe during the holidays. However, short of complete isolation there is no guarantee of safety, as long as the virus remains at pandemic levels.
