

## New Service: ATAC-sequencing

ATAC-seq (Assay for Transposase-Accessible Chromatin sequencing) is now available as a full-service offering at the GARP Core, covering the entire workflow from cells to sequencing. This powerful technique allows for genome-wide profiling of open chromatin regions, providing insights into gene regulation, transcription factor binding, and the epigenomic landscape.

Refer to [ATAC-seq sample submission guidelines](#) for cell submission requirements and the [pricing](#) detail. Or contact us by email at [garpcore@bcm.edu](mailto:garpcore@bcm.edu).
